

# Designing and building for the **EDITOR EXPERIENCE**

Andreas Sahle - @pixelmord wunderkraut

# Who is an editor?

## ★ Roles in real life

- Content Author
- Editor
- Translator
- Asset Manager

# Design for roles

# Roles

- Set up roles like editor and translator ...
- Start testing early with user stories and personas
- the permission system is no replacement for an interface strategy

# What does an editor want?

- create pages
- add/edit content
- find and select content / link content
- add menu item
- translate text

# How do editors think?

★ editors think in pages

- how shall a “page” look like?

# Automatic vs. manual pages

- most websites are a mixture of automatic and manual page creation
- the hard part is defining the separation of editable and „automatic“

# How do editors think?

★ everything is content

- „I want to add a picture **here**“
- „I want to translate **this** text“
- „I want to add another item to the **list**“

# everything is content

A Web Page

http://mydrupalsite.com

## How a \*normal\* person thinks...

Conference website [My acc](#)

Home About us **Navigation** Travel Exhibits Opportunities

**Content**

Join us for the 32nd annual conference on good life!  
Mark your calendars: May 17-19 2011  
At Hynes **Content** Center

Register Today

### Welcome!

This is a place holder for us to write great things about our conference and make people sign up. It is very important for us that people sign up to this conference. I know the registration fee is pret **Content** but come on, we need to make money, right? How else we will save up for the exotic holidays?

### Our sponsor

BC is our premium sponsor for our event. They are a popular gaming company with not-sa money **Content** they chose to sponsor this conference. Please check out their website: [www.abc.com](http://www.abc.com)

Powered by Drupal

<http://drupal.org/node/1175694>

# Is there an editing mode?

- One theme for everything vs. separation in „admin“ and „frontend“ theme
- Crossing the line between „backend“ and „frontend“
- How much „backend“ does an editor need?

# Where Drupal makes our life harder

- chronological order is often reverse
- no distinct system for structuring content
- too much interface – total control
- the configuration and editing options are all over the place

# Where Drupal makes our life harder

★ more additional functionality leads to loss of consistency

- Taxonomy for categorizing, for menu structure, for switching options
- standard menu, menu block, taxonomy menu
- drupal blocks, views blocks, views content panes, node blocks, minipanel etc.

# Where Drupal makes our life easier

★ we are building with a framework

- great architecture
- hook\_world\_alter
- there's a module for that
- a big community

# Interface should be simple and intuitive

Andreas Sahle - @pixelmord wunderkraut 

# simple and intuitive

- fast & efficient
- avoid confusion
- remove „clutter“

# Do editors need HELP?

★ Sometimes less help is more

- don't think help text, think „wizard“
- don't think help text, think „action button“

# No help here....

The screenshot shows the Drupal administration interface. At the top, there is a navigation bar with links for Home, Administration, and Help. Below this, the breadcrumb trail reads 'Home > Administration > Help'. The main heading is 'Administration menu'. The page content is partially obscured by a dark dropdown menu that lists various Drupal modules. The visible text on the page includes:

The administration menu module provides a dropdown menu arranged for one- or two-click access to most administrative tasks (assuming the user has the proper permissions). Administration menu also provides a way to view the number of anonymous and authenticated users, and allows for integration with the menu varies from module to module. For example, the contributed module [Devel](#), for instance, makes strong use of the access to development tools.

The administration menu [settings page](#) allows you to modify some elements of the menu's behavior and appearance. Since the menu is rendered in your site's theme and CSS files. See the advanced module README for more information on customizations.

The menu items displayed in the administration menu depend upon the actual permissions of the viewer. First, the administration menu items are filtered by the *Access administration menu* (admin\_menu module) permission. Second, a user must be a member of a role with the *Access to view administrative links*. And, third, only currently permitted links are displayed; for example, if a user is not a member of the *Administer users* (user module) and *Administer users* (user module), the *User management* menu item is not displayed.

The dropdown menu lists the following modules: admin\_menu, backup\_migrate, block, contextual, date, dblog, design\_test, devel, diff, environment\_indicator, features, field, field\_sql\_storage, field\_ui, file, filter, googleanalytics, help, i18n, i18n\_block, i18n\_menu, i18n\_string, image, l10n\_update, list, locale, menu.

Heeeeeeeelp!

## Hero unit

Bootstrap provides a lightweight, flexible component called a hero unit to showcase content on your site. It works well on marketing and content-heavy sites.

### Markup

Wrap your content in a `div` like so:

```
1. <div class="hero-unit">
2.   <h1>Heading</h1>
3.   <p>Tagline</p>
4.   <p>
5.     <a class="btn btn-primary btn
6.       -large">
7.         Learn more
8.       </a>
9.   </p>
10. </div>
```

# Hello, world!

This is a simple hero unit, a simple jumbotron-style component for calling extra attention to featured content or information.

# It is easy to get confused by an interface with many controls

The screenshot shows a web interface for editing a 'Testpage'. At the top, there is a breadcrumb trail: 'Home » Administration » Structure » Pages'. Below this, the page title is 'Testpage'. The main content area is titled 'Variants » Panel » Content'. On the right side of this header, there are buttons for 'Clone', 'Export', 'Delete', 'Disable', 'Add variant', and 'Import variant'. On the left side, there is a sidebar menu with options: 'Summary', 'Settings', 'Basic', 'Access', 'Menu', 'Variants', 'Panel', 'Summary', 'General', 'Selection rules', 'Contexts', 'Layout', 'Content', and 'Preview'. The 'Content' section is active. The main content area is titled 'Variant operations' and has buttons for 'Clone', 'Export', 'Delete', and 'Disable'. Below this, there is a text box with the instruction: 'Add content items and change their location with a drag and drop interface.' There is a collapsed section for 'Display settings'. Underneath, there is a 'Title type' dropdown menu set to 'Manually set'. Below that is a 'Title' input field. A note below the input field says: 'The title of this panel. If left blank, a default title may be used. Set to No Title if you want the title to actually be blank.' Below the title field, there are two dashed boxes labeled 'Left side' and 'Right side', each with a gear icon. At the bottom of the content area, there are three buttons: 'Update', 'Update and save', and 'Update and preview'.

# Streamlining the interface

- clutter keyboard - [http://www.flickr.com/photos/abhi\\_ryan/2444817523/](http://www.flickr.com/photos/abhi_ryan/2444817523/)

Andreas Sahle - @pixelmord wunderkraut

# Show all controls needed for a specific role

The image shows a dashboard interface with two side panels. The left panel is titled "Left side" and contains an "Add new pane" button. The right panel is titled "Right side" and also contains an "Add new pane" button. Both panels have a toolbar with icons for settings (gears), editing (brush), deletion (trash), and a four-way arrow icon. The left panel displays "Who's online" with a status message "There is currently 1 user online." and a list containing the name "admin". The right panel displays "Jugis Praemitto" with a status message "Submitted by Anonymous (not verified) on Mon, 06/11/2012 - 02:25" and a colorful graphic consisting of four quadrants (red, green, purple, orange) with a faint circular pattern. Below the graphic is the text "Cui esca iaceo magna nibh odio praesent vulpes. Huic nutus valetudo verto."

# pick a date

The screenshot shows a form with two main sections: 'Authored by:' and 'Authored on:'. The 'Authored by:' field contains the text 'admin' and a note 'Leave blank for Anonymous.'. The 'Authored on:' field is a date picker showing 'June 2010'. The date picker is open, displaying a calendar grid for June 2010. The grid shows days of the week (SU, MO, TU, WE, TH, FR, SA) and dates from 1 to 30. The time '1:45AM' is visible next to the date picker, and a note 'Leave blank to use' is present below it.

[http://drupal.org/project/date\\_popup\\_authored](http://drupal.org/project/date_popup_authored)

# prevent validation failure

The screenshot shows a form with two fields: 'Title' and 'Headline'. The 'Title' field has a character limit of 247 characters left. The 'Headline' field has a character limit of 3 characters left. The 'Headline' field contains the text 'Now that we know who you are, I know who I am. I'm not a mistal'.

- HTML5 elements
- [http://drupal.org/project/html5\\_tools](http://drupal.org/project/html5_tools)

# See the messages right where the error occurred

The screenshot shows two identical forms side-by-side. Each form has a 'Hello World' heading, a paragraph of placeholder text, and a 'Reply' section with fields for 'Your name', 'Subject', and 'Comment'. A red error message 'Comment field is required.' is displayed at the top of each form. A blue callout box with the text 'Inline Messages' and 'Move \$messages for selected forms inline' is positioned between the forms. A blue double-headed arrow points from the callout box to the error messages on both forms, illustrating the feature's function.

### Configure new Existing node

**Enter the title or NID of a node**

  
 @1, @2, ..., @N to use arguments passed into the panel.

Override title

You may use %keywords from contexts, as well as %title to contain the original title.

Leave node title

Advanced: if checked, do not touch the node title; this can cause the node title to appear twice unless your theme is aware of this.

Link the node title to the node

Check this box if you would like your pane title to link to the node.

Include node links for "add comment", "read more" etc.

**Template identifier**

This identifier will be added as a template suggestion to display this node: node--panel--IDENTIFIER.tpl.php. Please see the Drupal theming guide for information about this.

**Build mode**

Teaser ▼

Select a build mode for this node.

# autocomplete with meta data

The screenshot shows a 'Search content' dialog box with a search input field containing 'Lorem'. Below the input field, there are search results categorized by content type. The first category is 'Content · Article', which includes two results. The second result, 'Lorem ipsum dolor sit amet.', is highlighted in blue. The second category is 'Content · Basic page', which includes two results. At the bottom of the dialog, there is a 'class' label and an empty input field, along with 'Insert link' and 'Cancel' buttons.

# create menu item with existing content

The image shows three sequential screenshots of the Drupal administration interface for configuring a menu. The first screenshot shows the 'Main menu' configuration page with a 'New menu item' being added. A dropdown menu is open, and 'Existing content' is selected. A red circle highlights the 'Save' button. The second screenshot shows a confirmation message: 'You're about to create a new menu item for an existing content. Complete the process by finding and selecting an existing content to add to the menu.' Below this is a table of content items with a 'select' button circled in red. The third screenshot shows the 'Main menu' configuration page again, but now with 'About us' added to the menu list. A red arrow points from the 'select' button in the second screenshot to the 'About us' item in the third.
